

## Case Study

HORTICULTURE—HELLEBORES  
Germany

### Treatment

On 26 March 1998 and 23 April 1998, 120 Christmas roses in pots were treated with 2g Plocher PlantVital (mixed with 10 litres of water). No additional chemical treatment.

### Result

In comparison to control plants the PLOCHER- treated plants showed very little damage. The leaves are lighter and brighter green, and have noticeably stronger-developed veins.
