### VETERINARIAN SPECIALISING IN RACEHORSES

Hermanus  
Cape Town  
South Africa

"I was introduced to PLOCHER products recently ( $\pm$  2 months ago). I have used it on all species of animals except pigs and children and so far I am very excited about it.

**Plocher Horse Manure Composter** is a product used to wet the stable before you put down the bedding and then you spray it on top of the bedding once a week. You also spray it on your compost heap. This prevents fly infestations extremely well. We are at present trying it on our own yard in Cape Town. It seems to work very well indeed, of course the summer months will tell us more.

**Plocher Weekly Boost** will keep your horses' normal bacterial populations in its gut very healthy and this will make the horses better able to withstand the stresses of eating a high concentrate diet and the mental stress of competitive training. Remember, the horse is adapted to being a grazing animal and almost 65% of his body weight is involved in his intestines and digestive system. Within this, therefore, millions of bacteria which now have to adapt to living with concentrate food which has a very high acid content. This food then changes the natural bacterial balance. The use of Plocher Weekly Boost helps maintain a healthy balance for the bacteria that cannot exist in an acid environment by supplying oxygen.

This, in the long term, translates to a quieter, more peaceful temperament – healthy intestines and stomach.

I seriously doubt a horse on this would ever get stomach ulcers (quite a common thing among racehorses). The horses do much better on the food, ie. get fatter with less food. Their coats shine and their hooves are of a better quality.

I would definitely use it on all young growing horses (competitive horses) and any horses worth a lot of money.

The important thing to remember is, it must be maintained constantly and you can't give it one day and not the next and still expect to get results. Also it takes  $\pm$  3 weeks to a month before you will see results."
