

Testimonial

LIVERY OWNER

Mr Pieter Hugo

Canada

Mr Pieter Hugo had a problem with one of his prize Arab horses: the horse was injured and developed Keloids (a thickening of the flesh). This condition was not treatable by the vet.

Treatment

Mr Hugo can treating the leg with Plocher Standard Cream.

Result

After three weeks of treatments, the horse's leg was back to normal. The vet remarked that he had never seen anything like this before.

Mr Hugo commented, " We now keep a permanent supply of Plocher Standard Cream in the event of any horses being injured. A recently imported Arab, which has to be shown in one month's time was injured a week ago. We are confident that with the Plocher Standard Cream treatment, he will be ready for showing in time.
