### IMPROVED STABLE CLIMATE AND MUCK HEAP

Christa & Hans Karner  
Michaelnbach  
Germany

“About a year ago, we met a couple from Germany, who had been using PLOCHER products in their stables for years.

In spring 2003 we met them again, and spoke about Plocher Horse Manure Composter (AK 2651) in great detail, and decided to try it out.

Immediately after the first stable treatment we could no longer smell the ammonia. Fly infestations in the summer drastically reduced and our muck heap barely grew larger in size.

Now, in the winter, the muck heap is free of snow even as the thermometer goes lower and lower.

It seems to work in a completely different way to anything else we have ever used. The rotting is simply accelerated.

The compost (kitchen waste, garden waste, etc.) used to be a stinking heap with innumerable mosquitoes, worms and other pests (we are not biologists and do not know names) is now free of these and fully decomposed.

Yours sincerely

Christa & Hans Karner”
