

PLOCHER PROGRAMME FOR PIGS

Optimise productivity and welfare, reduce costs and environmental impact

PLOCHER products are unique, relying on nature and natural life cycles to provide the solution for an ecological, profitable future for agriculture. They are not bacteria, enzymes or bugs, and are suitable for use in conventional and organic systems.

PLOCHER WATERKAT

Water quality is crucial for optimal animal care. Plocher WaterKat is a catalyst which re-vitalises water and helps to improve quality, taste and dissolved oxygen levels of water, so consumption rises. It helps to:

- Increase citric acid cycle which provides more energy, and plays a part in the production of female hormones and fertility
- Reduce aggressive limescale and improve hygiene
- Reduce level of toxins, heavy metals, pollutants and pathogens

PLOCHER PIG SPECIAL

Extensive research demonstrates that Whole Herd Care can help to:

- Condition and revitalise the whole herd
- Reduce stress, so housed pigs become more alert and settled
- Aid aerobic decomposition of slurry

PLOCHER FARROWING AND WEANER CARE

- Ensuring the best start in life for piglets, this product can help support the sow through farrowing
- Benefits of use have been shown to reduce stress at weaning

PLOCHER SLURRY TREATMENT

- Stimulates strong aerobic microbial activity and significantly reduces anaerobic bacteria like e-coli
- Slurry becomes and remains liquefied, reducing fly infestations
- Significantly reduces production of ammonia and noxious odours
- Improves housing climate and hygiene
- Reduces nitrate and nitrite levels producing high quality nitrogen-rich liquid fertiliser

PLOCHER KOMPOSTER

- Improves housing climate and hygiene
- Significantly reduces odours, pathogens and fly infestations
- Fixes nitrogen and other nutrients into manure, producing top quality fertiliser

APPLICATION

PLOCHER WATERKAT

Plocher WaterKat treats up to 400 gallons/1500 litres/20-25 LU of water per day without the use of chemicals, or the use of any electrical or magnetic source of energy.

Installation

1. Site the Plocher WaterKat between the water supply pipe and the main shutoff valve.

NOTES: The Plocher WaterKat MUST be at least 1m away from electrical motors and fuse boxes, and record an electro-magnetic field of less than 200nT.
Ensure the Plocher WaterKat will not get wet or touch the ground.

2. Having selected the fixing point on the pipe, fix the Plocher WaterKat on the pipe using the clamps, ensuring that the Plocher WaterKat is in direct contact with the water pipe.

3. Thoroughly rinse any screen filters in the water system and check the screens weekly until clear of deposits.

PLOCHER PIG SPECIAL

Plocher Pig Special can be added to feed or drinking water.

APPLICATION RATE: 30g added to each ton of liquid feed or water
50-60g added to each ton of dry feed

PLOCHER FARROWING AND WEANER CARE

FARROWING: Plocher Farrowing and Weaner Care must be used with Plocher Pig Special.
Mix with feed or water.

APPLICATION RATE: 2g per sow daily for 3 days before and one week after farrowing

WEANERS: Plocher Farrowing and Weaner Care must be used with Plocher Pig Special.
Mix with feed or water.

APPLICATION RATE: 0.5g per weaner daily for one week before and one week following weaning.
Do not exceed 0.5g.

PLOCHER SLURRY TREATMENT

Mix Plocher Slurry Treatment with plenty of water (max 500g/20 litres) and evenly spread throughout the housing or slurry pit/store. If the slurry is crusted, ensure that Plocher Slurry Treatment penetrates the crust.

IN SLURRY PITS, RECEPTION PITS, SLURRY STORES AND LAGOONS:

One-off treatment: 1.5kg/100m³ (20,000 gallons) or 1.5 litres/100m³ (20,000 gallons)

IN HOUSING, SHEDS, BARNs OR STABLES:

Once a week, apply 5g/500g LW, or 2-3g/m²

PLOCHER KOMPOSTER

Plocher Komposter can be used in housing and on manure heaps.

IN CATTLE SHEDS

APPLICATION RATE: 5g Plocher Komposter/500g LW, or 2-3g/m²

FIRST APPLICATION: Mix with plenty of water and use a sprayer to spray on all surfaces including floor, walls and ceiling.

SUBSEQUENT APPLICATION: Mix with water and spread over straw before chopping, dry sand or sawdust before distributing over the bedding.

ON HEAPS

Mix 40g/m³ with water, dry sand or sawdust, leave to stand and apply evenly through the heap.

ADDITIONAL INFORMATION:

PLOCHER Programmes are not a substitute for veterinary treatment. Homeopathic treatments are preferable to the use of traditional medications - they will not interfere with the PLOCHER Programme. Continue application of the Programme during medical treatment. Use of antibiotics, medication and detergents may delay the effect of the PLOCHER Programme.

STORAGE:

Products should be stored in a cool, dry place, at least 1m from any fuse boxes or large electrical equipment. Store on wood or plastic, not metal or directly on the ground.

For the best results, the full range of products should be used together. These products are designed to have long-lasting beneficial effects and although they start working immediately, visible results may not be instantly apparent.
